

Key Points

Provide all-flash performance to all tenants and applications in your cloud.

Leverage multiple integration options with broad ecosystem support.

Simplify cloud operations with a DevOps-friendly environment.

Enable high-SLA workloads and self-service IT provisioning.

Deploy cloud-native applications faster with OpenStack on FlexPod Datacenter.

Deliver an OpenStack cloud—quicker, easier, and with less risk—leveraging integrated NetApp storage solutions.

For public and private clouds based on OpenStack® software—especially those for enterprise applications—you need a robust storage infrastructure that is available, efficient, and protected.

NetApp® storage integration with OpenStack makes cloud deployment simpler, faster, and more scalable. NetApp drivers for OpenStack block, file, and object storage are fully integrated and enable self-service IT provisioning.

NetApp offers the broadest all-flash enabled portfolio of storage and data management solutions for all OpenStack clouds, regardless of scale or workload.

- **ONTAP** block and file storage features ubiquitous data management.
- **SolidFire** block storage provides predictable performance at unlimited scale.
- **E-Series** block and object storage accelerates application performance.
- **StorageGRID® Webscale** object storage supports massive repositories and a global namespace.
- Learn how you can benefit from **NetApp participation in the OpenStack Foundation**.
- Learn more about **FlexPod Datacenter with Red Hat Enterprise Linux OpenStack Platform CVD**, from Red Hat, Cisco, and NetApp, and check out the published **Design Guide** and **Deployment Guide**.
- Visit **thePub** NetApp's open-source collaboration site, for blogs, source code, community discussions, and documentation.
