When you need to connect to sensitive information that lives in the most locked-down parts of your datacenter, it is critical to be laser-focused on how you define your private cloud policy. Our customers embrace [open standards](http://www8.hp.com/us/en/cloud/cloud-leadership.html) (<http://www8.hp.com/us/en/cloud/cloud-leadership.html>) because they provide the most options for integration with current networking structures, security rules and a wide range of vendors for software and hardware.
