ⓘ

Open source software for creating private and public clouds.

OpenStack software controls large pools of compute, storage, and networking resources throughout a datacenter, managed through a dashboard (/software/openstack-dashboard/) or via the OpenStack API (http://developer.openstack.org). OpenStack works with popular enterprise and open source technologies (/marketplace/drivers/) making it ideal for heterogeneous infrastructure.
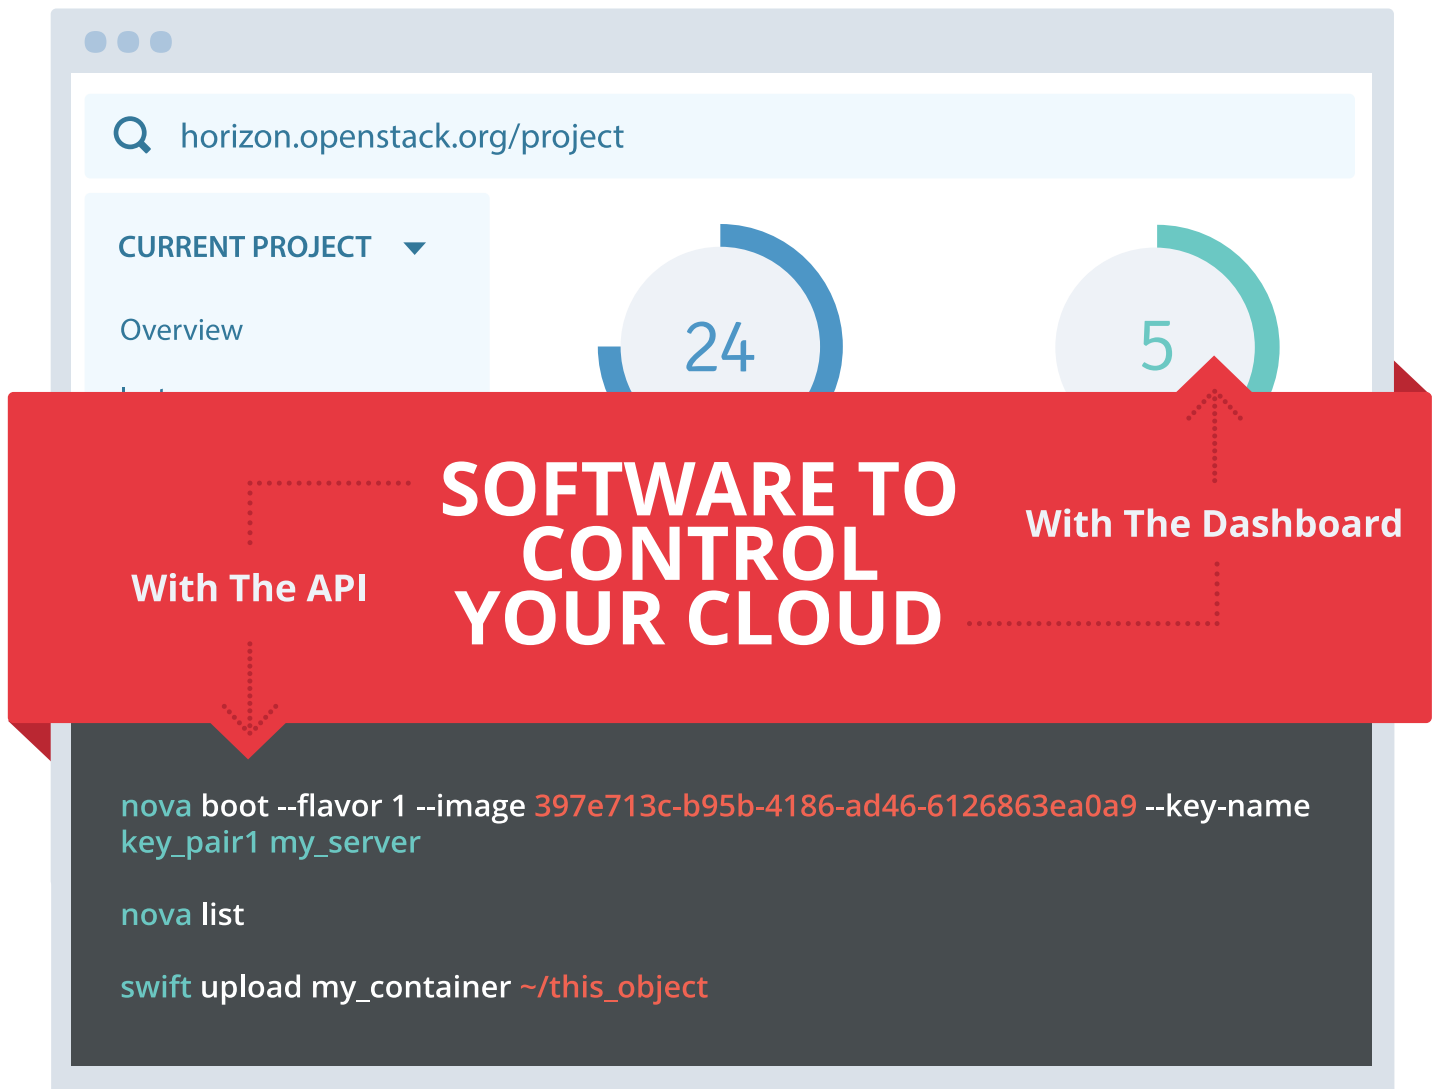

Hundreds of the world's largest brands (/user-stories/) rely on OpenStack to run their businesses every day, reducing costs and helping them move faster. OpenStack has a strong ecosystem (/foundation/companies/), and users seeking commercial support can choose from different OpenStack-powered products and services in the Marketplace. (/marketplace/)

The software is built by a thriving community (/community/) of developers, in collaboration with users, and is designed in the open at our Summits (/summit/).
